wemalo-connect Release

Version 1.2.3

Date: 13.11.2017

- [WordPress API](#) implemented
- New REST Api calls implemented

Version 1.2.2

Date: 14.09.2017

- Shopware configuration simplified
- Activating/deactivating of wemalo instances implemented
- new rest call for creating inventories implemented

Version 1.2.1

Date: 17.08.2017

- Loading return orders from Shopware and pushing back booked returns integrated

Version 1.2.0

Date: 16.08.2017

- Integration of [Shopify](#) api
- Enhancements to shopware api

Version 1.1.0

Date: 07.07.2017

- [Shopware API](#) has been integrated into wemalo-connect

- new rest calls for [wemalo release](#) 1.5.2.2 implemented, see [api documentation](#)

Version 1.0.1

Date: 28.06.2017

- new call for creating multiple products at once added to connect api
- possibility to set a product as activated/deactivated added to connect api
- new rest calls need wemalo-backend 1.5.2.1 or later

Version 1.0.0

Date: 09.06.2017

- [connect-api](#) has finally been implemented
- wemalo-connect now allows using a wemalo rest api to transmit product data and goods orders and to load information about stock changes and sent packages
- the api needs [wemalo-backend](#) 1.4.4 or higher

Version 0.2

Date: 07.06.2017

- additional rest calls implemented
- rest calls are now being validated before sending them to wemalo
- preparation for managing shop systems in wemalo-connect

Version 0.1

Date: 31.05.2017

- first beta version of [wemalo-connect](#) has been released
- in this version it's possible to manage users, wemalo

instances and to communicate with wemalo via a rest api

Wemalo Release

Version 1.8.1.4

Date: 23.10.2018

- reservation process splitted by client

Version 1.8.1.3

Date: 22.10.2018

- new auto report packaging material implemented
- loading goods order parcel information via rest call (via wemalo-connect)

Version 1.8.1.2

Date: 27.09.2018

- minimum dimension per sku (for clearing)
- new rest call for getting not synchronized bookings (GET and PUT)
- external article number added to available stock rest call
- system inventory: added product name and new overview with current stock, reserved stock and packed items implemented

Version 1.8.1.1

Date: 12.09.2018

- fix: Deutsche Post shipping label were not printed automatically

Version 1.8.1.0

Date: 07.09.2018

- new auto reports: goods order status and incoming stock report
- product unit names are now unique
- whitespaces removed from address fields
- mysql views removed and stock movements view optimized
- filter handling and dashboard queries optimized
- added a [serial number check functionality](#)
- fix: orders were set to packed even if block flag was set

Version 1.8.0.5

Date: 15.08.2018

- optionally executing services based on number of orders already sent
- executing inventory booking improved
- supporting placeholders in dispatcher profile ids
- fix: rest api: externalId and sku was mixed up in call product/getAll

Version 1.8.0.4

Date: 13.07.2018

- rest api: additional fields added to getSentPackages call

- rest api: returning back wemalos attachment id when adding a goods order document
- setting a parcel as finally packed when adding a tracking number

Version 1.8.0.3

Date: 10.07.2018

- loading goods receipt by order id filter adjusted (will now load related order only)
- information about number of palettes and boxes added to delivery orders
- fix: shipping label for Deutsche Post without postmark was not created anymore

Version 1.8.0.2

Date: 09.07.2018

- setting connection timeout to 3s when printing documents
- printing and creating shipping labels separated
- fix: typo in rest api fixed (deliveryNote instead of deliveryNumber when announing returns)

Version 1.8.0.1

Date: 05.07.2018

- fix: gsom is used for creating json from java classes. But in one case a class referenced it self what let in some situations to a stack over flow.

Version 1.8.0.0

Date: 04.07.2018

- creating of documents has been moved to a new

application to minimize work load in wemalo backend
- using a service for sending emails instead of sending it from backend directly
- house number logic has been extended
- additional rest calls and webhooks (esspacially for Parcelito)
- [fast send](#) functionality introduced
- export customers email information for DHL Easylog, DPD Delisprint and GLS Gepard optionally
- fix: searching by ean2 and ean3 in product master data has been fixed
- fix: searching by ean when creating a goods order manually fixed
- fix: show products if client is activated only

Version 1.7.0.1

Date: 21.06.2018

- reservation strategy optimized

Version 1.7.0.0

Date: 03.06.2018

- new product units feature implemented (<http://help.wemalo.com/gebindefunktion/>)

Version 1.6.0.1

Date: 23.05.2018

- additional countries added to street/housenumber split functionality

Version 1.6.0.0

Date: 16.05.2018

- new feature [shipping cost matrix](#)
- possibility for ignoring a product while pick and pack implemented
- multiple enhancements and design optimizations
- changing an article from a product to a different one in refurbishment view provided
- added a warning weight property to dispatcher profiles

Version 1.5.5.1

Date: 28.03.2018

- fix: loading refurbishment entry by id fixed
- fix: don't break auto reservation in case of picks

Version 1.5.5.0

Date: 06.03.2018

- auto report open orders extended
- aggregate sku information on relocate order view
- csv upload functionality for uploading tracking numbers as batch files
- setting weight limits for packing
- avoiding recreating shipping label if tracking number is already set
- issue a warning when total weight exceeds the max gross weight
- displaying serial number and lot for relocation view and stock view
- serial number and lot added to relocation
- trigger webhook for stock updates
- trigger refurbishment action webhook

- new calls for getting not synched return bookings and setting bookings as synchronized
- execute webhooks when delivery order was booked, returns and refurbishment hooks adjusted
- print settings added to print function

Version 1.5.4.5

Date: 21.02.2018

- deleting unused reservations in clean up call
- goods order information added to booked returns call

Version 1.5.4.4

Date: 12.02.2018

- refactoring and minor enhancements

Version 1.5.4.3

Date: 07.02.2018

- new field for charging customers added to refurbishment view
- lot information added to packing list

Version 1.5.4.2

Date: 31.01.2018

- options added to refurbishment view

Version 1.5.4.1

Date: 23.01.2018

- new call for adding notes to orders

- cell type added to stock overview
- creating serial number barcodes for returns
- option for skipping serial number check added to announced returns

Version 1.5.4.0

Date: 12.01.2018

- adding linked order id to rest call for announcing return orders
- trigger wemalo connect webhook on status update
- adding documents to return shipments implemented
- lot and serial number added to inventory

Version 1.5.3.12

Date: 04.01.2018

- generate package list after package was packed
- new rest call for getting list of available dispatcher profiles

Version 1.5.3.11

Date: 20.12.2017

- serial number unique check as customer option
- split house number and street for NL
- break auto reservation in case of relocations
- added price information to order position
- setting priority when creating an order

Version 1.5.3.10

Date: 12.12.2017

- setting blocked reason optimized

- split house number and street for DACH
- rate limiter added to reduce amount of parallel reservation bookings
- avoiding reimport of sent orders

Version 1.5.3.9

Date: 30.11.2017

- setting street and house number as required fields
- amount of reserved articles added to system inventory

Version 1.5.3.8

Date: 29.11.2017

- additional integration of lot management in picking, packing and returns processes
- ignore sent orders when importing an order via rest api

Version 1.5.3.7

Date: 22.11.2017

- if a picking list is being closed and has non-picked goods orders, those orders will no longer been canceled but moved back to open
- a picker doesn't have access to close picking list button anymore
- lot management configuration integrated into client master data
- on packing view, already packed goods orders won't be listed anymore

Version 1.5.3.6

Date: 20.11.2017

- show a waiting circle if creating a shipping label takes longer
- REST Api extend for loading refurbishment data by serial number only
- fix: if shipping label couldn't be created, an order was blocked. That's ok, but we missed setting the order status to blocked packed. This has now been adjusted.

Version 1.5.3.5

Date: 13.11.2017

- REST Api extended
- possibility for re-importing orders if already sent implemented
- adding reason for partially reserved to REST API
- new rest call for getting reduced stock information implemented
- lot management added to customer, lot start and end added to slim stock information call
- „forget" external goods order id if cancelled
- re-create order if updating an existing order and if order can be cancelled
- delivery note added to goods receipt api call
- added an additional check before closing stock orders

Version 1.5.3.4

Date: 18.10.2017

- Image to pdf converter implemented (used for directly printing Deutsche Post labels)
- generate package files if print service was activated only

Version 1.5.3.3

Date: 12.10.2017

- additional services added to shipcloud/dhl
- fix: grouping by carrier in price list fixed

Version 1.5.3.2

Date: 11.10.2017

- pick categories enhanced
- dispatcher product added to sent parcel calls
- check if return position was part of linked goods order
- option loading positions by sku instead of external id in rest calls integrated

Version 1.5.3.1

Date: 10.10.2017

- handover Deutsche Post parcels immediately if activated only

Version 1.5.3.0

Date: 03.10.2017

- bill export extended: services and pick categories were added

Version 1.5.2.19

Date: 28.09.2017

- external id added to product data when returning all products via wemalo-connect
- fix: mutli cient picking lists thrown an exception if

there were no single client picking list…

- fix: path optimized picking didn't recognize storage fields

Version 1.5.2.18

Date: 20.09.2017

- enhanced splitting of street and housenumber

Version 1.5.2.17

Date: 19.09.2017

- filter out dispatcher profiles by parcel weight
- adding name 1, name 2 and name 3 to Deutsche Post shipping label

Version 1.5.2.16

Date: 18.09.2017

- email added to csv export (GLS Gepard, DHL Easylog)
- purpose field for DPD COD extended
- additional services added to DHL Webservice (email notification, return receipt, visual age check)
- retry reservation if an error happened due to lock exception
- showing/hiding inactive users and clients, edit button not shown if goods order is cancelled
- loading stock movement data last 90 days by default

Version 1.5.2.15

Date: 12.09.2017

- provided additional logs when creating/updating a goods order via soap call failed

Version 1.5.2.14

Date: 11.09.2017

- log messages when changing from draft to partially didn't work enhanced
- fix: setting to partially reserved if order is in status draft

Version 1.5.2.13

Date: 07.09.2017

- updating partially reserved orders enhanced

Version 1.5.2.12

Date: 01.09.2017

- don't change goods order status to ready for packing of if order is not in status picking
- saving Deutsche Post Internetmarke request and response in case of an error
- using , instead of . in parcels weight (easylog csv export)
- default sender address data has been changed
- ready for shipment flag will now been set based on destination storage cell
- serial numbers will now been displayed on storage cells
- added a call for resetting goods order reservations
- check goods orders priority when reserving goods
- possibility to reserve goods by etd (goods will already been reserved, but goods order will stay in status partially reserved until etd has been reached).
- delete goods order reservations if partially reserved only and reservations on partially reserved was not activated

- fix: loading stock movements by storage cell didn't work anymore

Version 1.5.2.11

Date: 24.08.2017

- when determining available goods, packing area will now also been counted
- new rest call for executing inventories (needs wemalo-connect update)
- booked return shipment orders will not be loaded anymore when entering a new return order
- database field for email addresses in end of day report set to text to allow more than 255 characters

Version 1.5.2.10

Date: 20.08.2017

- product group and serial number added to stock movement view
- stock movement search enhanced and changed from soap to rest call
- end of day report enhanced

Version 1.5.2.9

Date: 17.08.2017

- adding additional information to sent packages
- announce return position by sku allowed
- fix: when returning return position (external id and delivery note were mixed up)

Version 1.5.2.8

Date: 15.08.2017

- offering strategies for handling unknown products while importing new orders (skip position, create new, throw error)
- permission handling in rest service optimized

Version 1.5.2.7

Date: 08.08.2017

- new auto report end of day implemented
- possibility to send auto reports to multiple recipients as comma separated list implemented

Version 1.5.2.6

Date: 02.08.2017

- fix: search for picking list if picking box doesn't contain picking list relation anymore

Version 1.5.2.5

Date: 31.07.2017

- booking history enhancements: product group and serial number are now being displayed, loading of history enhanced

Version 1.5.2.4

Date: 17.07.2017

- new call for getting all products via wemalo-connect implemented

- additional log entries added
- permission handling optimized

Version 1.5.2.3

Date: 10.07.2017

- negative stock implemented (products that were ordered but not on stock yet)
- save goods order status changes in separat history table to get an overview of status changes

Version 1.5.2.2

Date: 06.07.2017

- max values set to product dimension (max width=3m, max height=5m, max depth=3m)
- new rest calls for wemalo-connect:
  - getting available stock (including virtual stock)
  - getting a product by its external id
- Refactoring:
  - moved generic report creation from soap to rest
  - Obviously, pick quantity option was not read correctly (by wemalo-web). In the database it was set to 0, but it was as read as 1. So changing the values to fix this.
  - update virtual quantities after updating a product
  - search for active products only
- fix: when executing reservation for parts list: if executed automatically positions were not deleted before reservation started. This could result in duplicate positions. This has now been fixed.
- fix: pick by serial number didn't select the one scanned, but by product and storage cell

Version 1.5.2.1

Date: 28.06.2017

- wemalo-connect now can create multiple products at once and change a products active flag
- wemalo-app integration
- fix: field cell name was not propagated correctly

Version 1.5.2.0

Date: 23.06.2017

- for new deliveries and returns with serial numbers a check has been integrated to proof, that neither sku/ean was scanned, nor the serial number is already on stock
- Since some scanners add whitespaces to serial numberes, serial numbers are now being saved without whitespaces
- displaying serial numbers in sent packages
- fix: new attributes packaging and functional were not saved in refurbishment view

Version 1.5.1.0

Date: 20.06.2017

- sending order package content to shipcloud in metadata field (sku, quantity, serial number if available)
- function to relocate products with serial numbers added to handheld/mobile view

Version 1.5.0.0

Date: 19.06.2017

- goods order positions and reserved articles refactored to optimize data loading
- product parts lists introduced

- bugfix: sometimes delivery notes were generated and printed twice

Version 1.4.4.1

Date: 12.06.2017

- filter extended in serial number view: it's now possible to search by a serial number
- dhl express now added as shipcloud product
- it's now possible to add a serial number to a goods order position manually
- bugfix: reserving goods order positions if new attributes packaging and function were added

Version 1.4.4.0

Date: 08.06.2017

- [new refurbishment view](#) and article attributes packaging and functional implemented
- product groups implemented and added to product search
- wemalo is now fully integrated in [wemalo-connect](#)
- new customer field allocation added

Version 1.4.3.3

Date: 06.06.2017

- wemalo-connect: Loading return shipment orders by external ID
- searching for products in product master data, creating incoming orders/goods orders and service allocation enhanced
- creating product parts lists
- Bug fix: avoiding null pointer exception if searching for an return without customer oder number

Version 1.4.3.2

Date: 31.05.2017

- when creating goods orders automatically, search product by sku if external id was not found
