

REST API workflow

Is using wemalos rest api, at least the following calls might be used for interacting with wemalo.

First of all, an account needs to be set up for you. You'll get a rest api token that is being used for authorization. Please see header information: Authorization

Product master data

- For transmitting product master data, we recommend sending multiple products at once if possible by using <http://connect-api.wemalo.com/#api-Product-addMultiple>.
- Get stock updates by webhook **stock_change** (<http://connect-api.wemalo.com/#api-WebHook-registerWebHook>).

Orders

- Transmit new orders with following call: <http://connect-api.wemalo.com/#api-GoodsOrder-addGoodsOrder>. If the wemalo internal id was returned, you know the order was created successfully.
- Get order update by webhook **status_update** (<http://connect-api.wemalo.com/#api-WebHook-registerWebHook>).
- Get sent packages by flag: <http://connect-api.wemalo.com/#api-GoodsOrder-getSentPackagesByFlag>. It will return all sent packages, that have not been marked as synchronized yet.
- Set loaded sent packages as synchronized: <http://connect-api.wemalo.com/#api-GoodsOrder-putSentPackagesFlag>.
